PREPAREDNESS QUIZ

ANSWERS:

1. What is the first step in preparing for a disaster?

b) Create an emergency communication plan

An emergency communication plan lays the foundation for understanding responsibilities and the best course of action to ensure safety.

2. What should not be included in a basic emergency kit?

a) Matches and Candles

A flashlight and batteries is a better bet for dependable light in situations where visibility is low.

3. Which of the following should you NOT do during a flood?

a) Drive or walk through floodwaters

Driving and walking through floodwaters is dangerous as there could be live wires within the water that can't be seen easily, leading to potential electrocutions.

4. What is the recommended amount of daily drinking water per person?

b) 2.7-3.7 liters

The recommended amount of daily drinking water for women is 11 cups or 2.7 liters, while for men it is 15 cups or 3.7 liters.

5. True or False: It is safe to use a generator indoors during a power outage.

b) False

Generators emit carbon monoxide, an odorless and invisible gas that can cause carbon monoxide poisoning.

6. What should you do if you receive a tornado warning?

c) Seek shelter in most interior room on the lowest level

In the case of a tornado, it is safest to stay away from windows and doors that lead to the harsh weather outside.

7. True or False: Every family member should learn and understand the emergency plan.

a) True

Every family member should know and understand the emergency plan to reduce potential risk during an emergency. Always use clear communication to ensure comprehension.

8. True or False: Having an emergency preparedness kit in my home means I am 100% prepared for an emergency.

b) False

Having an emergency preparedness kit does not mean you are 100% prepared. You should also have an emergency plan that everyone understands. Although being prepared is the first step, your actions during an emergency matter just as much.
